HEALTH DATA, SCREENING AND SURVEILLANCE

PATIENT TRACKING

IT-HEALTH™ Each individual is assigned a medical tag using **GENUS TAG** Technology — working both as a visual tag and as scannable access to health care to the platforms system of digital profile health data.

DATA COLLECTION

IT-HEALTH™ System permits data collection throughout the whole chain of care using unified protocols, from the smart devices. Directly at entry points, throughout air ports, sea ports and on board ships.

HEALTH CARD

All medical health records as well as the personal and clinical data are securely encrypted, privacy is protected according to regulations in force. Synchronisation of data is forced by the system through the **GENUS TAG** either to write, view and update data.

DATA SHARING

IT-HEALTH™ Data sharing and integration, increase the operative efficiency and reduce the possibility of clinical error risks. Further clinical evaluation and data update are always possible along the chain of care and help increase data accuracy.

SECURITY

Access to **IT-HEALTH™** System is permitted only to authorised personnel, who are forced to login in specifying their professional profile thus identifying themselves and giving automatically their position and role in a mission.
